

WHOLE BODY CRYOTHERAPY (WBC) CHAMBER MADE IN KOREA

WHOLE BODY CRYOTHERAPY (WBC) CHAMBER

INTRO

A Cryo Chamber in a slimming machine is a specialized feature that uses cryotherapy to promote fat loss and improve body contouring. Cryotherapy involves exposing the body to extremely cold temperatures, typically between -100°C and -150°C, for a short period, typically 1-2 minutes. This cold exposure helps stimulate the body's natural processes for fat burning and promotes overall skin tightening.

KEY FEATURES

Targeted Fat Reduction

Cryo chambers help with fat loss by inducing thermogenesis, where the body burns calories to generate heat after exposure to extreme cold. This process may aid in reducing stubborn fat in targeted areas.

Non-Invasive Slimming Solution

Unlike surgical procedures like liposuction, cryotherapy is a non-invasive treatment with no downtime, making it an appealing option for slimming and body contouring.

Accelerated Metabolism

The cold temperatures stimulate the body's metabolism, increasing calorie burn both during and after the session, which supports weight loss efforts.

Cellulite Reduction

Cryotherapy can improve skin texture by reducing the appearance of cellulite, giving a smoother, firmer look to treated areas.

KEY FEATURES

Targeted Fat Reduction

Cryo chambers help with fat loss by inducing thermogenesis, where the body burns calories to generate heat after exposure to extreme cold. This process may aid in reducing stubborn fat in targeted areas.

Non-Invasive Slimming Solution

Unlike surgical procedures like liposuction, cryotherapy is a non-invasive treatment with no downtime, making it an appealing option for slimming and body contouring.

Accelerated Metabolism

The cold temperatures stimulate the body's metabolism, increasing calorie burn both during and after the session, which supports weight loss efforts.

Cellulite Reduction

Cryotherapy can improve skin texture by reducing the appearance of cellulite, giving a smoother, firmer look to treated areas.

BENEFITS

BOOSTS METABOLISM FOR FAT BURNING

Cryotherapy increases calorie burn by activating thermogenesis, aiding in weight loss and fat reduction.

NON-INVASIVE AND QUICK

A painless, non-surgical procedure with sessions lasting just 2–4 minutes and no recovery time needed.

REDUCES CELLULITE AND TIGHTENS SKIN

Stimulates collagen production to improve skin elasticity, firmness, and the appearance of cellulite.

ENHANCES OVERALL WELLNESS

Improves circulation, reduces inflammation, and provides a mood and energy boost alongside slimming benefits.
